

MH 272 Specifications

High Voltage Omni polar Hall Effect Switch

MH272 Hall effect switch is a temperature stable, Superior high-temperature performance is made possible through a dynamic offset cancellation that utilizes chopper-stabilization.

MH272 includes the following on a single silicon chip: voltage regulator, Hall voltage generator, small-signal amplifier, chopper stabilization, Schmitt trigger, and open drain output. Advanced DMOS wafer fabrication processing is used to take advantage of low-voltage requirements, component matching, very low input-offset errors, and small component geometries.

This device requires the presence of omni-polar magnetic fields for operation.

MH272 is rated for operation between the ambient temperatures -40°C and $+85^{\circ}\text{C}$ for the E temperature range. and -40°C to 125°C for the K temperature range. The two package styles available provide magnetically optimized solutions for most applications. Package types SO is an SOT-23, a miniature low-profile surface-mount package, while package UA is a three-lead ultra-mini SIP for through-hole mounting.

The package type is in a Halogen Free version was verified by third party Lab.

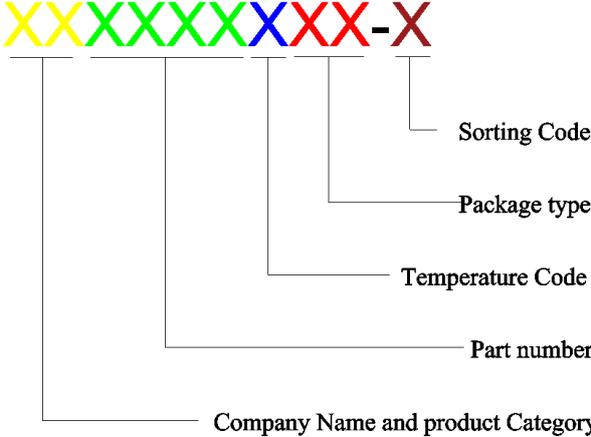

Features and Benefits

- DMOS Hall IC Technology.
- Operation range from 2.5V to 26V .
- Omni polar, output switches with absolute value of North or South pole from magnet.
- Reverse bias protection on power supply pin.
- High Sensitivity for reed switch replacement applications.
- Low sensitivity drift in crossing of Temp range.
- High ESD Protection, HBM $>\pm 4\text{KV}(\text{min})$
- Output Current limit in 100mA.
- RoHS compliant 2011/65/EU and Halogen Free

Applications

- Solid state switch.
- Limit switch.
- Current limit.
- Interrupter.
- Magnet proximity sensor for reed switch replacement.
